Vertech's President Philippe Bierry sends you his best wishes as the year comes to an end

« The glass industry strives to innovate itself in order to provide ever-improving quality to its Clients.

The Digital Age is not contradictory to the traditional age-old know-how of glassmaking.

The challenge for the future will be to provide complete synthetic and customized information to mobile users in order to improve reactivity and decision making at any level.

I am confident that our knowledge of the glass industry will allow us to succeed in these new challenges together .

I wish you an excellent New Year! »

Happy New Year!

All Vertech' team wishes you Happy Holidays and Best Wishes for 2015!

SIL2015 Maintenance Contract

A new generation of Maintenance Contract

In order to meet your needs better our Maintenance Contract has changed to **include an annual onsite upgrade of the SIL system**. This upgrade goes to replace the annual technical visit.

Our new Maintenance Contract includes:

- **Prepaid time of technical support** according to your needs with a 20% savings on the daily rate
- **Annual software fees** with a 50% savings on the software fees
- **Onsite periodical upgrades** to allow managing a complete budget for maintenance

This new generation of contract aims to make SIL upgrades easier for our Clients.

You will also benefit from high added value improvements integrated into SIL every year thanks to the feedback of our Clients around the world.

Additionally, considering the increasing number of equipment released every year, frequent upgrades will guarantee you make the most of any equipment you chose to use.

Independently from the Maintenance Contract, our team provides training sessions adapted to your needs:

- to train new employees on the lines
- to provide training on new SIL functionalities
- to provide customized trainings on any requested topic

Our new SIL training catalogue will be available soon!

Intra Vertech'

Visiting a bottling plant

In our ongoing quest for more knowledge of the glass manufacturing process, Vertech' staff visited a French bottling factory in the Macon region at the end of October.

The visit was scheduled during the annual meeting of the company, gathering all the employees together. The aim was to learn more about bottling lines and to better understand the impact of bottle quality on business.

The factory visit continued on to the wine cellars and ended with a wine tasting of local wines.

Tech

Excel SILAdd In

Excel SILAdd-In is a data extraction tool that allows you to search ongoing production data easily. This tool allows you to conduct your own analysis without opening SIL applications.

Excel SILAdd-In is already available in the SIL2014 version.
