SIL Production Monitoring System is constantly evolving thanks to our clients' proposals as well as the developments performed by our R&D team.

Here is a sample of the latest new SIL functionalities installed in glass factories worldwide:

- SIL has been installed for **glass tubes** in Neubor plant, Italy (BORMIOLI ROCCO)
- **SIL External Resorting** has been installed in Vallée de la Bresle, France (ZIGNAGO VETRO)
- **SILXchange** has been installed in Yenisehir, Mersin, and Eskisehir plants, Turkey (SISECAM)
- **SILXchange** is being tested in Italy at BORMIOLI ROCCO
- **SILMould** has been installed in Kuban plant, Russia (RUSCAM)

SIL system has also been installed recently in:

- **United Arab Emirates (SAVERGLASS)**
- **Sao Paulo, Brazil (VERALLIA)**

SIL2015: Total Productive Maintenance

Total Productive Maintenance (TPM) started in Japan in 1971 with the automotive sector, and subsequently spread to western countries in the 1980s.

TPM aims to improve the equipment efficiency by involving the Operators proactively in the maintenance supervision.

In order to help the Glassmakers to clearly identify equipment downtime reasons, a TPM module has now been integrated in SIL2015. This module allows following up on any equipment downtime in an easy and ergonomic way.

Using simple pop-up windows the Operators are guided to provide feedback on the downtime causes using predefined lists of reasons that can expand into several sub lists for a higher level of detail. For example: HE treatment – Low level of treatment fluid.

With the events being recorded in the SIL database, you have the possibility to extract data with Excel Add-In, and to conduct an analysis on production downtime.

This functionality - already installed in Germany - has enabled our client to identify the reasons for production losses better.

All our clients with a SIL Maintenance Contract and software upgrade scheduled for this year will benefit from this new functionality among many other new developments.

Read all about the new functionalities included in our SIL2015 release by downloading "SIL2015 New functionalities catalogue" from the link below, or by requesting it at sales@vertech.eu.

Intra Vertech'

Ulas Topal takes over as CEO of Vertech'.

With both a technical and a sales background, Ulas Topal gained experience in Germany, Switzerland and Turkey.

After joining Vertech's sales team in August 2010, he was in charge of developing sales in Africa, Asia, the Middle East, and Russia.

In 2013, he was promoted to Commercial Director after a successful period of sales.

Ulas Topal's appointment to this new role marks a significant step in Vertech's history as it coincides with the company's 20 year anniversary to be celebrated this year.

Ulas Topal takes over from Philippe Bierry, owner of Vertech', who is now dedicated to financial management as well as the

development of new markets.

Ulas Topal has reaffirmed his vision of making of SIL system the premier production monitoring system for the Glass industry worldwide by developing the company's core values: the pursuit of perfection, integrity, trust, teamwork, diversity, and respect.

Vertech' team wishes Ulas every success in his new duties.
